

Florida (Pensacola Beach) Dune Restoration Project: This project, which installed 474,634 plants and 28,600 linear feet of sand fencing, was completed in November of 2012. The total number of acres restored was approximately 16.41 acres. The Warranty Inspections were conducted on May 6, 2013 (180 days from completion of the project) for the planted vegetation and on November 5, 2013 (365 days from the completion of the project) for the installed sand fencing. The Warranty Inspections documented that the planted vegetation survivability met or exceeded the 80% warranty requirement and that the installed sand fencing met the twelve month warranty against deterioration and decay. The site has been routinely inspected since the Warranty Inspections, and it has been determined that the plantings and sand fencing are doing well. If it is determined in future inspections that additional maintenance of the plants and/or sand fencing is needed, existing O & M funds will be used to perform those maintenance activities, and that information will be provided.
